

(k) An assessment of how the regional water supply plan and the projects identified in the funding plans prepared pursuant to sub-subparagraphs (a) 3.c. and (b)2.c. support the recovery or prevention strategies for implementation of adopted minimum flows and minimum water levels or water reservations, including minimum flows and minimum water levels for Outstanding Florida Springs adopted pursuant to s. 373.805; while ensuring that sufficient water will be available for all existing and future reasonable-beneficial uses and the natural systems identified herein; and that the adverse effects of competition for water supplies will be avoided.

(6) Annually and in conjunction with the reporting requirements of s. 373.536(6)(a)4., the department shall submit to the Governor and the Legislature a report on the status of regional water supply planning in each district. The report shall include:

(a) A compilation of the estimated costs of and an analysis of the sufficiency of potential sources of funding from all sources for water resource development and water supply development projects as identified in the water management district regional water supply plans.

(e) An overall assessment of the progress being made to develop water supply in each district, including, but not limited to, an explanation of how each project in the 5-year water resource development work program developed pursuant to s. 373.536(6)(a)4., either alternative or traditional, will produce, contribute to, or account for additional water being made available for consumptive uses, minimum flows and minimum water levels, or water reservations; an estimate of the quantity of water to be produced by each project; and an assessment of the contribution of the district's regional water supply plan in providing sufficient water to meet the needs of existing and future reasonable-beneficial uses for a 1-in-10-year drought event, as well as the needs of the natural systems.

Section 22. Part VIII of chapter 373, Florida Statutes, consisting of ss. 373.801-373.813, Florida Statutes, is created and entitled the "Florida Springs and Aquifer Protection Act."

Section 23. Section 373.801, Florida Statutes, is created to read:

373.801 Legislative findings and intent.—

(1) The Legislature finds that springs are a unique part of this state's scenic beauty. Springs provide critical habitat for plants and animals, including many endangered or threatened species. Springs also provide immeasurable natural, recreational, economic, and inherent value. Springs are of great scientific importance in understanding the diverse functions of aquatic ecosystems. Water quality of springs is an indicator of local conditions of the Floridan Aquifer, which is a source of drinking water for many residents of this state. Water flows in springs may reflect regional aquifer conditions. In addition, springs provide recreational opportunities for swimming, canoeing, wildlife watching, fishing, cave diving, and many

other activities in this state. These recreational opportunities and the accompanying tourism they provide are a benefit to local economies and the economy of the state as a whole.

(2) The Legislature finds that the water quantity and water quality in springs may be related. For regulatory purposes, the department has primary responsibility for water quality; the water management districts have primary responsibility for water quantity; and the Department of Agriculture and Consumer Services has primary responsibility for the development and implementation of agricultural best management practices. Local governments have primary responsibility for providing domestic wastewater collection and treatment services and stormwater management. The foregoing responsible entities must coordinate to restore and maintain the water quantity and water quality of the Outstanding Florida Springs.

(3) The Legislature recognizes that:

(a) A spring is only as healthy as its aquifer system. The groundwater that supplies springs is derived from water that recharges the aquifer system in the form of seepage from the land surface and through direct conduits, such as sinkholes. Springs may be adversely affected by polluted runoff from urban and agricultural lands; discharges resulting from inadequate wastewater and stormwater management practices; stormwater runoff; and reduced water levels of the Floridan Aquifer. As a result, the hydrologic and environmental conditions of a spring or spring run are directly influenced by activities and land uses within a springshed and by water withdrawals from the Floridan Aquifer.

(b) Springs, whether found in urban or rural settings, or on public or private lands, may be threatened by actual or potential flow reductions and declining water quality. Many of this state's springs are demonstrating signs of significant ecological imbalance, increased nutrient loading, and declining flow. Without effective remedial action, further declines in water quality and water quantity may occur.

(c) Springshed boundaries and areas of high vulnerability within a springshed need to be identified and delineated using the best available data.

(d) Springsheds typically cross water management district boundaries and local government jurisdictional boundaries, so a coordinated statewide springs protection plan is needed.

(e) The aquifers and springs of this state are complex systems affected by many variables and influences.

(4) The Legislature recognizes that action is urgently needed and, as additional data is acquired, action must be modified.

Section 24. Section 373.802, Florida Statutes, is created to read:

373.802 Definitions.—As used in this part, the term:

(1) “Department” means the Department of Environmental Protection, which includes the Florida Geological Survey or its successor agencies.

(2) “Local government” means a county or municipal government the jurisdictional boundaries of which include an Outstanding Florida Spring or any part of a springshed or delineated priority focus area of an Outstanding Florida Spring.

(3) “Onsite sewage treatment and disposal system” means a system that contains a standard subsurface, filled, or mound drainfield system; an aerobic treatment unit; a graywater system tank; a laundry wastewater system tank; a septic tank; a grease interceptor; a pump tank; a solids or effluent pump; a waterless, incinerating, or organic waste-composting toilet; or a sanitary pit privy that is installed or proposed to be installed beyond the building sewer on land of the owner or on other land on which the owner has the legal right to install such system. The term includes any item placed within, or intended to be used as a part of or in conjunction with, the system. The term does not include package sewage treatment facilities and other treatment works regulated under chapter 403.

(4) “Outstanding Florida Spring” includes all historic first magnitude springs, including their associated spring runs, as determined by the department using the most recent Florida Geological Survey springs bulletin, and the following additional springs, including their associated spring runs:

(a) De Leon Springs;

(b) Peacock Springs;

(c) Poe Springs;

(d) Rock Springs;

(e) Wekiwa Springs; and

(f) Gemini Springs.

The term does not include submarine springs or river rises.

(5) “Priority focus area” means the area or areas of a basin where the Floridan Aquifer is generally most vulnerable to pollutant inputs where there is a known connectivity between groundwater pathways and an Outstanding Florida Spring, as determined by the department in consultation with the appropriate water management districts, and delineated in a basin management action plan.

(6) “Springshed” means the areas within the groundwater and surface water basins which contribute, based upon all relevant facts, circumstances,

and data, to the discharge of a spring as defined by potentiometric surface maps and surface watershed boundaries.

(7) “Spring run” means a body of flowing water that originates from a spring or whose primary source of water is a spring or springs under average rainfall conditions.

(8) “Spring vent” means a location where groundwater flows out of a natural, discernible opening in the ground onto the land surface or into a predominantly fresh surface water body.

Section 25. Section 373.803, Florida Statutes, is created to read:

373.803 Delineation of priority focus areas for Outstanding Florida Springs.—Using the best data available from the water management districts and other credible sources, the department, in coordination with the water management districts, shall delineate priority focus areas for each Outstanding Florida Spring or group of springs that contains one or more Outstanding Florida Springs and is identified as impaired in accordance with s. 373.807. In delineating priority focus areas, the department shall consider groundwater travel time to the spring, hydrogeology, nutrient load, and any other factors that may lead to degradation of an Outstanding Florida Spring. The delineation of priority focus areas must be completed by July 1, 2018, shall use understood and identifiable boundaries such as roads or political jurisdictions for ease of implementation, and is effective upon incorporation in a basin management action plan.

Section 26. Section 373.805, Florida Statutes, is created to read:

373.805 Minimum flows and minimum water levels for Outstanding Florida Springs.—

(1) At the time a minimum flow or minimum water level is adopted pursuant to s. 373.042 for an Outstanding Florida Spring, if the spring is below or is projected within 20 years to fall below the minimum flow or minimum water level, a water management district or the department shall concurrently adopt a recovery or prevention strategy.

(2) When a minimum flow or minimum water level for an Outstanding Florida Spring is revised pursuant to s. 373.0421(3), if the spring is below or is projected within 20 years to fall below the minimum flow or minimum water level, a water management district or the department shall concurrently adopt a recovery or prevention strategy or modify an existing recovery or prevention strategy. A district or the department may adopt the revised minimum flow or minimum water level before the adoption of a recovery or prevention strategy if the revised minimum flow or minimum water level is less constraining on existing or projected future consumptive uses.

(3) For an Outstanding Florida Spring without an adopted recovery or prevention strategy, if a district or the department determines the spring has fallen below, or is projected within 20 years to fall below, the adopted

minimum flow or minimum water level, a water management district or the department shall expeditiously adopt a recovery or prevention strategy.

(4) The recovery or prevention strategy for each Outstanding Florida Spring must, at a minimum, include:

(a) A listing of all specific projects identified for implementation of the plan;

(b) A priority listing of each project;

(c) For each listed project, the estimated cost of and the estimated date of completion;

(d) The source and amount of financial assistance to be made available by the water management district for each listed project, which may not be less than 25 percent of the total project cost unless a specific funding source or sources are identified which will provide more than 75 percent of the total project cost. The Northwest Florida Water Management District and the Suwannee River Water Management District are not required to meet the minimum requirement to provide financial assistance pursuant to this paragraph;

(e) An estimate of each listed project's benefit to an Outstanding Florida Spring; and

(f) An implementation plan designed with a target to achieve the adopted minimum flow or minimum water level no more than 20 years after the adoption of a recovery or prevention strategy.

The water management district or the department shall develop a schedule establishing 5-year, 10-year, and 15-year targets for achieving the adopted minimum flows or minimum water levels. The schedule shall be used to provide guidance for planning and funding purposes and is exempt from chapter 120.

(5) A local government may apply to the department for a single extension of up to 5 years for any project in an adopted recovery or prevention strategy. The department may grant the extension if the local government provides to the department sufficient evidence that an extension is in the best interest of the public. For a local government in a rural area of opportunity, as defined in s. 288.0656, the department may grant a single extension of up to 10 years.

Section 27. Section 373.807, Florida Statutes, is created to read:

373.807 Protection of water quality in Outstanding Florida Springs.—By July 1, 2016, the department shall initiate assessment, pursuant to s. 403.067(3), of Outstanding Florida Springs or spring systems for which an impairment determination has not been made under the numeric nutrient

standards in effect for spring vents. Assessments must be completed by July 1, 2018.

(1)(a) Concurrent with the adoption of a nutrient total maximum daily load for an Outstanding Florida Spring, the department, or the department in conjunction with a water management district, shall initiate development of a basin management action plan, as specified in s. 403.067. For an Outstanding Florida Spring with a nutrient total maximum daily load adopted before July 1, 2016, the department, or the department in conjunction with a water management district, shall initiate development of a basin management action plan by July 1, 2016. During the development of a basin management action plan, if the department identifies onsite sewage treatment and disposal systems as contributors of at least 20 percent of nonpoint source nitrogen pollution or if the department determines remediation is necessary to achieve the total maximum daily load, the basin management action plan shall include an onsite sewage treatment and disposal system remediation plan pursuant to subsection (3) for those systems identified as requiring remediation.

(b) A basin management action plan for an Outstanding Florida Spring shall be adopted within 2 years after its initiation and must include, at a minimum:

1. A list of all specific projects and programs identified to implement a nutrient total maximum daily load;

2. A list of all specific projects identified in any incorporated onsite sewage treatment and disposal system remediation plan, if applicable;

3. A priority rank for each listed project;

4. For each listed project, a planning level cost estimate and the estimated date of completion;

5. The source and amount of financial assistance to be made available by the department, a water management district, or other entity for each listed project;

6. An estimate of each listed project's nutrient load reduction;

7. Identification of each point source or category of nonpoint sources, including, but not limited to, urban turf fertilizer, sports turf fertilizer, agricultural fertilizer, onsite sewage treatment and disposal systems, wastewater treatment facilities, animal wastes, and stormwater facilities. An estimated allocation of the pollutant load must be provided for each point source or category of nonpoint sources; and

8. An implementation plan designed with a target to achieve the nutrient total maximum daily load no more than 20 years after the adoption of a basin management action plan.

The department shall develop a schedule establishing 5-year, 10-year, and 15-year targets for achieving the nutrient total maximum daily load. The schedule shall be used to provide guidance for planning and funding purposes and is exempt from chapter 120.

(c) For a basin management action plan adopted before July 1, 2016, which addresses an Outstanding Florida Spring, the department or the department in conjunction with a water management district must revise the plan if necessary to comply with this section by July 1, 2018.

(d) A local government may apply to the department for a single extension of up to 5 years for any project in an adopted basin management action plan. A local government in a rural area of opportunity, as defined in s. 288.0656, may apply for a single extension of up to 10 years for such a project. The department may grant the extension if the local government provides to the department sufficient evidence that an extension is in the best interest of the public.

(2) By July 1, 2017, each local government, as defined in s. 373.802(2), that has not adopted an ordinance pursuant to s. 403.9337, shall develop, enact, and implement an ordinance pursuant to that section. It is the intent of the Legislature that ordinances required to be adopted under this subsection reflect the latest scientific information, advancements, and technological improvements in the industry.

(3) As part of a basin management action plan that includes an Outstanding Florida Spring, the department, the Department of Health, relevant local governments, and relevant local public and private wastewater utilities, shall develop an onsite sewage treatment and disposal system remediation plan for a spring if the department determines onsite sewage treatment and disposal systems within a priority focus area contribute at least 20 percent of nonpoint source nitrogen pollution or if the department determines remediation is necessary to achieve the total maximum daily load. The plan shall identify cost-effective and financially feasible projects necessary to reduce the nutrient impacts from onsite sewage treatment and disposal systems and shall be completed and adopted as part of the basin management action plan no later than the first 5-year milestone required by subparagraph (1)(b)8. The department is the lead agency in coordinating the preparation of and the adoption of the plan. The department shall:

(a) Collect and evaluate credible scientific information on the effect of nutrients, particularly forms of nitrogen, on springs and springs systems; and

(b) Develop a public education plan to provide area residents with reliable, understandable information about onsite sewage treatment and disposal systems and springs.

In addition to the requirements in s. 403.067, the plan shall include options for repair, upgrade, replacement, drainfield modification, addition of effective nitrogen reducing features, connection to a central sewerage system, or other action for an onsite sewage treatment and disposal system or group of systems within a priority focus area that contribute at least 20 percent of nonpoint source nitrogen pollution or if the department determines remediation is necessary to achieve a total maximum daily load. For these systems, the department shall include in the plan a priority ranking for each system or group of systems that requires remediation and shall award funds to implement the remediation projects contingent on an appropriation in the General Appropriations Act, which may include all or part of the costs necessary for repair, upgrade, replacement, drainfield modification, addition of effective nitrogen reducing features, initial connection to a central sewerage system, or other action. In awarding funds, the department may consider expected nutrient reduction benefit per unit cost, size and scope of project, relative local financial contribution to the project, and the financial impact on property owners and the community. The department may waive matching funding requirements for proposed projects within an area designated as a rural area of opportunity under s. 288.0656.

(4) The department shall provide notice to a local government of all permit applicants under s. 403.814(12) in a priority focus area of an Outstanding Florida Spring over which the local government has full or partial jurisdiction.

Section 28. Section 373.811, Florida Statutes, is created to read:

373.811 Prohibited activities within a priority focus area.—The following activities are prohibited within a priority focus area in effect for an Outstanding Florida Spring:

(1) New domestic wastewater disposal facilities, including rapid infiltration basins, with permitted capacities of 100,000 gallons per day or more, except for those facilities that meet an advanced wastewater treatment standard of no more than 3 mg/l total nitrogen, expressed as N, on an annual permitted basis, or a more stringent treatment standard if the department determines the more stringent standard is necessary to attain a total maximum daily load for the Outstanding Florida Spring.

(2) New onsite sewage treatment and disposal systems on lots of less than 1 acre, if the addition of the specific systems conflicts with an onsite treatment and disposal system remediation plan incorporated into a basin management action plan in accordance with s. 373.807(3).

(3) New facilities for the disposal of hazardous waste.

(4) The land application of Class A or Class B domestic wastewater biosolids not in accordance with a department approved nutrient management plan establishing the rate at which all biosolids, soil amendments, and

sources of nutrients at the land application site can be applied to the land for crop production while minimizing the amount of pollutants and nutrients discharged to groundwater or waters of the state.

(5) New agriculture operations that do not implement best management practices, measures necessary to achieve pollution reduction levels established by the department, or groundwater monitoring plans approved by a water management district or the department.

Section 29. Section 373.813, Florida Statutes, is created to read:

373.813 Rules.—

(1) The department shall adopt rules to improve water quantity and water quality to administer this part, as applicable.

(2)(a) The Department of Agriculture and Consumer Services is the lead agency coordinating the reduction of agricultural nonpoint sources of pollution for the protection of Outstanding Florida Springs. The Department of Agriculture and Consumer Services and the department, pursuant to s. 403.067(7)(c)4., shall study new or revised agricultural best management practices for improving and protecting Outstanding Florida Springs and, if necessary, in cooperation with applicable local governments and stakeholders, initiate rulemaking to require the implementation of such practices within a reasonable period.

(b) The department, the Department of Agriculture and Consumer Services, and the University of Florida Institute of Food and Agricultural Sciences shall cooperate in conducting the necessary research and demonstration projects to develop improved or additional nutrient management tools, including the use of controlled release fertilizer that can be used by agricultural producers as part of an agricultural best management practices program. The development of such tools must reflect a balance between water quality improvement and agricultural productivity and, if applicable, must be incorporated into the revised agricultural best management practices adopted by rule by the Department of Agriculture and Consumer Services.

Section 30. Subsection (29) of section 403.061, Florida Statutes, is amended to read:

403.061 Department; powers and duties.—The department shall have the power and the duty to control and prohibit pollution of air and water in accordance with the law and rules adopted and promulgated by it and, for this purpose, to:

(29)(a) Adopt by rule special criteria to protect Class II and Class III shellfish harvesting waters. Such rules may include special criteria for approving docking facilities that have 10 or fewer slips if the construction and operation of such facilities will not result in the closure of shellfish waters.
